Program Description
(R, TP/SS): 346A

This curriculum is designed to provide individuals with the principles, theory, and practices associated with state-of-the-art fire science and management, including issues related to tactical fire operations, fire safety, firefighting and emergency services leadership and management, and community fire issues.

Students expand their thinking beyond fire-specific issues in areas related to firefighting through coursework in human resource management, administration, homeland security and emergency/disaster management, fire protection services, safety and prevention, and investigation.

This curriculum is designed to meet the needs of professional and volunteer fire service personnel and those seeking employment in the fire and emergency services.

Program Outcomes

Upon completion of this program a student will be able to:

• Demonstrate understanding of building construction and associated fire codes.
• Apply and discuss water supply management for fire protection systems and fire scene use.
• Apply chemistry, mathematics, and physics to solve fire protection problems.
• Identify and differentiate the various forms of fire, their fundamental scientific principles, and their associated mitigation and response strategies.
